

Stage 2 Disinfectant Byproduct (DBP) Sampling Plan

In accordance with State of Utah Rule R309-210-10(3): Any Community (COM) or Non-Transient Non-Community (NTNC) drinking water system that regularly applies a chemical disinfectant must develop and implement a DBP monitoring plan. The system must maintain current version of the plan on file and submit a copy of 1) the monitoring plan, 2) a schematic of the distribution system, and 3) the justification for site selection (IDSE water, modeling analysis, etc.) to the Division of Drinking Water.

BASIC WATER SYSTEM INFO

Water System Name: _____ Water System #: _____

Residual Disinfectant Type: ☐ Chlorine ☐ Chlorine Dioxide ☐ Ozone

of Service Connections: _____

Population (# of customers): _____

Sampling Schedule (# of sampling locations): _____

☐ Per Quarter ☐ Per Year

Source Water Types:

- ☐ Ground water
☐ Ground water purchasing from wholesale Water System #: UTAH
☐ Ground water Under Direct Influence of surface water
☐ Surface water
☐ Surface water purchasing from wholesale Water System #: UTAH

SITE SELECTION INFO

Associated Rules:

R309-210-9(2)(b)(i)(Q): A dual sample set (i.e., a TTHM and an HAA5 sample) must be taken at each monitoring location during each monitoring period.

- One dual sample set must be taken at the highest TTHM (trihalomethanes) sampling site, at a location that represents maximum residence time; typically in the furthest reaches of your distribution system, or where water is oldest.
This location is denoted as **MR001**.

- One dual sample set must be taken at the highest HAA5 (haloacetic acids) sampling site, at a location that represents the average residence time; typically located mid distribution system
This location is denoted as **MD001**.

R309-210-10(3)(ii):

- Water system must identify which locations will be used for compliance monitoring by alternating selection of locations representing high TTHM and high HAA5 levels until the required number of compliance monitoring locations have been identified.

Associated Info:

Disinfection By Product Sampling schedules are based on population and source water type. DBPs may be required quarterly, annually, or every three years. For a complete list of possible schedules please see associated DBP handout.

Water system sampling schedules with sampling locations and details are available at any time at WaterLink.utah.gov

SAMPLES

Sample Code	Specific sampling location ADDRESS	Site Characteristics / Site Selection Justification (check those that apply)
MR001	_____	<input type="checkbox"/> Highest TTHM/HAA5 in prior data <input type="checkbox"/> Endpoint of distribution system and/or maximum water age <input type="checkbox"/> Other: _____
MR002	_____	
MR003	_____	
MR004	_____	
MD001	_____	<input type="checkbox"/> Highest TTHM/HAA5 in prior data <input type="checkbox"/> Midpoint of a large distribution system <input type="checkbox"/> Endpoint of distribution system and/or maximum water age <input type="checkbox"/> Other: _____
MD002	_____	
MD003	_____	
MD004	_____	

Annual samples must be collected within a specific time frame in accordance with State of Utah Rules

R309-210-10(2)(a)(ii)(N): All systems **must** monitor during months of highest DBP concentrations.

R309-210-9(2)(b)(i)(R): The peak historical month is the month with the highest TTHM or HAA5 levels or the warmest water temperature.

CERTIFICATION

I certify that I am the person authorized to fill out this application and the information I have provided is accurate and complete to the best of my knowledge at the time it was completed.
